

## GROUP 12

### SHEET METAL AND BUMPERS

The grille will be the same design now used on Specials and Skylarks, with the exception of an ornament added to the left side. The grille will be painted black where it is now painted silver. The radiator is a new cross-flow design with filler and cooler lines on the left side requiring new radiator mounting panels. The battery will be mounted on the left side of engine compartment. The frame is basically the same as used on convertible (67) styles with the addition of a reinforced rear upper control arm cross member to take the increased engine torque. Body mount locations 1 and 2 will use Sportwagon mounts. See illustrations for grille, radiator and battery changes.
